The most advanced technique available for beauty.

FeelSoft experience and innovation takes a major step forward, creating the **NANOCONCEPT** and its new generation cannula, the **MICRO FILLER NEEDLE**.

Surface reduction provides less resistance on cannula entry, which translates into significantly less trauma to the skin, without leaving any noticeable marks. All this improves patient outcomes and results, as well as doctor’s experience, during and after treatment.

Nanotechnology offers more precision, higher flexibility and optimal control of the product’s application, especially when using high-viscosity fillers.

The MICRO FILLER NEEDLE comes with a special marking that acts as the visual aid for the position of the cannula inside the skin, and a kit with a needle of the same calibre.

Less surface means less injection resistance: minimal skin trauma.

**Precision.** Uniform injection of highly viscous fillers.

**Flexibility.** The Micro Filler enhances the embedding effect, thereby allowing the treatment of larger areas through one, single entry point.

**Indications:** dermal fillers to treat nasolabial folds, marionette lines, nose, chin, lips, body and genital areas, and to enhance the malar region.

**WHAT DEFINE US**

- Thousands of clinical cases and evaluations
- International awards
- Strong presence at congresses
- Continuing medical education
- International workshops
- Techno surveillance system
- Certified Board

---

**SOFT**
NANO CONCEPT

Nanotechnology at the service of aesthetic medicine: what is revolutionary about this new concept is the combination of technology and craft. The NANO CONCEPT minimizes the inner wall thickness, thereby creating an ultra-thin needle that offers significant benefits to both doctor and patient.

Reducing trauma is the treatment goal, and FeelSoft offers a minimally invasive solution: the NANO CONCEPT.

MICRO FILLER ADVANTAGES

Allows introducing high viscosity substances, while reducing secondary effects.

- Little or no pain
- Optimal flexibility
- Minimal trauma
- No downtime

Optimal flexibility with path-following control.

While simplifying the injection technique, the cannula improves both the patient and doctor experience, making the treatment less traumatic and more precise.

Indicated with all types of dermal fillers, for face, body or genital area.
